

Reno All Other CY2025 Metrics Scenario Report

Model lock: Expanded HHVBP, CY2025 performance / CY2027 payment, measure set CY2025 (version locked).

Validation boundary: Public-data-only, expert-configured, semi-synthetic, simulation-based, and not outcome-validated.

These results describe configured model scenarios. They do not establish real-world clinical effects, payment effects, or a uniquely best assignment policy.

Scope and controls

This report uses the same controlled geography design as the PPH report: age_group=age_70_80 and the other stated controls remain fixed. The ZIP is for distribution profiling only; assignment ZIP-history routing is not run.

All metrics in this report are higher-is-better. Each mean is therefore described as points below the configured best anchor and points above the configured worst anchor. Values are model-generated distributions, not empirical patient-level Reno estimates.

Limitations

The distributions reflect expert elicitation, configured factor favorability, and analytic Beta moment matching. Agency practice, caregiver support, OASIS detail, scheduling, clinician capacity, and patient-level outcomes were unavailable.
